We inform you that our proposal includes an instrumental analysis designed with an avant-garde methodological proposal with robust estimations of factor validity and reliability, which has not previously been carried out and allows for an expansion of the current revision of the tool in question in the Latin American sample, as well as parameters of more accurate measure for future empirical comparative research.

In addition, we allow ourselves to confirm that: a) The authors have no funding to report; b) The authors have no support to report; and c) The authors have declared that no competing interests exist.

Without another, I say goodbye.
Sincerely,

Rodrigo Moreta-Herrera
